

TDBOX

# MEET THE NEW WAY OF MEDICAL TRAINING.

## A short introduction.

*TD What?!* The T(ractus) D(igestives) Box (TDBOX) is created to bring medical training with animal models to the next level.

With a compact training box equipped with a dark and transparent cover, compatibility to all mayor electrocautery brands, storage facilities and available in a hard- or showcase training is made easy and professional.

# Training.

Our TD Box is a multi-functional tool, usable to train the needed skills in gastro-enterology.

## 1. EMR/ESD

Polypectomy, endoscopic mucosal resection (EMR), and endoscopic submucosal dissection (ESD) treatment has become more and more effective and less invasive. The TD Box is designed for all EMR/ESD training configurations (colon/rectum/oesophagus/stomach).

[More info](#)

## 2. Stenting

Stenting in all segments of the GI tract is performed on a regular basis in most hospitals. The TD box is suitable for training of most stent indications and all steps involved.

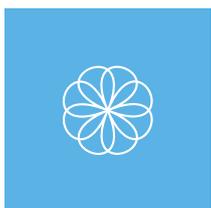

[More info](#)

## 3. Foreign Body Management

Management of ingested foreign bodies (FB) is a common clinical problem and endoscopic removal is recommended in most situations. The TD box is designed for an extensive and realistic training with all products mentioned and therefore ideal for workshops and "hands on" sessions.

## 4. Bleed and Complication Management

A large scale of different techniques has been developed to treat bleeding and perforations in the total GI tract, such as hemostasis clips, variceal banding and injection sclerotherapy. The TD box is designed for solid workshops and training on all techniques mentioned.

[More info](#)

## 5. Miscellaneous

The TD box has unlimited options for training and workshops with or without porcine models. Topics as PEG placement, tattooing, dilatation, gastric balloon placement and removal are great for TD Box training.
